Reproductive complications are oligomenorrhea or amenorrhea, sub-fertility, endometrial hyperplasia and cancer. Cosmetic complications include acne & facial hair growth. Associated psychosocial concerns are depression and disordered eating.

Anxiety, depression and reduced quality of life are also common in this condition. Diagnosis is clinical and is supported by lab findings. Regular exercise, healthy foods, and weight control are the key treatments for PCOS.

Pharmacological treatments can reduce unpleasant symptoms and helps to prevent long-term health problems. Guidelines are needed to aid early diagnosis, appropriate investigation, regular screening and treatment of this common condition.
